

2 PIECES BALL VALVE CLASS 1500

MXT-7342717- Steel BSP
MXT-7342817- Steel NPT
MXT-7352717- Stainless steel BSP
MXT-7352817- Stainless steel NPT

Size : DN 1/4" to DN 2"
Ends : Threaded female BSP, NPT or S.W.
Min Temperature : - 30°C in S.S. and - 20°C in carbon steel
Max Temperature : + 250°C
Max Pressure : 250 Bars (Class 1500)
Specifications : Anti blow-out stem
Antistatic device
Full bore

Materials : Carbon steel or Stainless steel

2 PIECES BALL VALVE CLASS 1500

SPECIFICATIONS :

- Full bore
- Anti blow-out stem
- Class 1500
- Antistatic device
- Atex
- 2 pieces type
- Galvanization treatment of zinc anti-corrosion coating, 8µ thickness (for ref.734)

USE :

- Chemical and pharmaceutical industries, petrochemical industries, hydraulic installation, compressed air
- Min and max Temperature Ts : - 30°C to + 250°C for stainless steel type **Ref.735**
- Min and max Temperature Ts : - 20°C to + 250°C for carbon steel type **Ref.734**
- Max Pressure Ps : 250 bars
- Steam : 30 bars maximum

RANGE :

- Ball valve class 1500 forged normalised ASTM A105N carbon steel zinc coated body **Ref. 734** DN 1/4" to DN 2"

- Ball valve class 1500 forged stainless steel body ASTM A182 F316L **Ref. 735** DN 1/4" to DN 2"

- Stainless steel 304 with red cover handle **Ref. 9830316-9830318**

- Locking device **Ref. 9830301-9830315**

- Galvanized steel handwheel **Ref.9830571-9830574**

ENDS :

- Female / female threaded BSP **Ref. 734** and **735**
- Female / female threaded NPT **Ref. 7341** and **7351**
- Socket Welding ends **on request**

2 PIECES BALL VALVE CLASS 1500

STANDARDS :

- Fabrication according to ISO 9001 : 2008
- DIRECTIVE 97/23/CE : CE N° 0948
Risk category III Module B+C1
- Pressure tests according to API 598, table 6
- Designing according to ANSI B16.34
- Threaded female BSP cylindrical ends according to ISO 228-1
- Threaded female NPT ends according to ANSI B2.1
- Materials according to NACE MR 01-75
- ATEX Group II Category 2 G/2D Zone 1 & 21 Zone 2 & 22 (optional marking)

ADVICE : Our opinion and our advice are not guaranteed and MXT shall not be liable for the consequences of damages. The customer must check the right choice of the products with the real service conditions.

INSTALLATION AND MAINTENANCE

BEFORE INSTALLATION :

- Pipe-line must be cleaned and free from residual of weldings, rubbish, shaving and every kind of extraneous materials.
- Pipe-line must be perfectly aligned and their support properly dimensioned so that there's no external constraint.
- Please use the right product according to the services conditions to seal the valve.
- Use the right bolt tightening so that the ends won't be damaged.
- **During welding operation, for S.W. types half open the valve and weld the valves according to special procedures (like in water) to protect the seat because it could burn.**

CLEANING AND TESTS

- Keep closed the valves during the cleaning operation so that there's no impurities between the ball and the body.
- Tests under pressure must be done with a cleaned pipe-line.
- Open partially the valve for tests. Pressure test do not exceed the valve specifications according to API 598.

MAINTENANCE

- It's recommended to operate the valve (open and close) 1 to 2 times per year.
- When intervention on the valve, be sure there's no pressure in the pipe-line, there's no fluid in it, and that it is isolated.
- The temperature must be low enough to operate without risks.
- If there's a corrosive fluid, inert installation before intervention.
