

KNIFE GATE VALVE PN10 S-GATE

Certificate 3.1

Size : DN 50 to DN 1000
Ends : Between flanges PN10
Min Temperature : -10°C for NBR seat (-15°C for EPDM)
Max Temperature : + 90°C for NBR seat (+ 130°C for EPDM)
Max Pressure : 10 Bars up to DN 200
Specifications : Rising non rotating stem, non rising handwheel
Unidirectional tightness
Weak head loss

Materials : Cast iron or Stainless steel

KNIFE GATE VALVE PN10 S-GATE

SPECIFICATIONS :

- Opened or closed valve
- Rising non rotating stem, non rising handwheel
- Unidirectional tightness (Respect the flow direction indicated by the arrow)
- Weak head loss
- Between flanges PN10
- Full crossing threaded lower holes and blind threaded top holes
- With handwheel
- With lever or chain handwheel (option)
- Possible with bipolar sensor O + C , voltage AC 15-240V 3A, IP66 type XCK M115C
- Deflector (option)
- 50% epoxy 50% polyester painting blue colour RAL 5005
- Other seats on request (FKM, PTFE, SILICONE ...)

USE :

- Water, water treatment, chemical pulp, powders, food industry, chemistry
- Min and max Temperature Ts : - 10°C to + 90°C for cast iron body with NBR seat **Ref.170**
- Min and max Temperature Ts : - 15°C to + 130°C for cast iron body with EPDM seat **Ref.171**
- Min and max Temperature Ts : - 20°C to + 130°C for stainless steel body with EPDM seat **Ref.172**
- Min and max Temperature Ts : - 20°C to + 130°C with **WHITE EPDM** seat(on request)
- Min and max Temperature Ts : - 10°C to + 180°C with **FKM** seat(on request)
- Min and max Temperature Ts : + 0°C to + 180°C with **PTFE** seat (on request)
- Min and max Temperature Ts : - 20°C to + 200°C with **SILICONE** seat (on request)
- When using powders, inverse flow direction

MAX PRESSURE :

SENSOR SIZE (in mm) AND SCHEMA :

Bipolar sensor O + C
(XE2S P2151)

STANDARDS :

- Fabrication according to ISO 9001 : 2008
- DIRECTIVE 2014/68/EU : Products excluded from directive (Article 4, § 3)
- Certificate 3.1 on request
- Pressure test according to ISO 5208, Rate A
- Between flanges PN10 according to EN 1092-1 PN10

ADVICE : Our opinion and our advice are not guaranteed and MXT shall not be liable for the consequences of damages. The customer must check the right choice of the products with the real service conditions.

KNIFE GATE VALVE PN10 S-GATE

INSTALLATION INSTRUCTIONS :

GENERAL GUIDELINES :

- Ensure that the valves to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the valves to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

INSTALLATION INSTRUCTIONS :

- **Before installing the valves, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the valves.
- **Ensure that both connecting pipes either side of the valve (upstream and downstream) are aligned** (if they're not, the valves may not work correctly).
- **Make sure that the two sections of the pipe (upstream and downstream) match, the valve unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the valve and can even cause a rupture.** To be sure, place the kit in position to ensure the assembling will work.
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the valve.**
- During installation operation, do not carry the valves by the handwheel.
- Valves can be installed in all positions but we recommend the above positions :

KNIFE GATE VALVE PN10 S-GATE

INSTALLATION INSTRUCTIONS (SUITE) :

- If the valve is installed at the end of the pipe, it must be between 2 flanges.
- The knife gate valves are unidirectional, respect the flow direction indicated on the body by the arrow.
When using powders, inverse flow direction
- Tighten the bolts in cross. For blind holes, use studs to have a good tightening and tighten them carefully so that they don't touch the gate.
- During cleaning operation, the valves must be opened.
- Tests must be done with cleaned installation and pipe.
- Test must be done with partially opened valve. Test pressure must not exceed valve specification according to ISO 5208.
- Open carefully the valve.
- Tighten the gland packing at the first start of the installation (with a moderate torque) so that there's no leakage and the handwheel is easy to operate. Make sure there's no contact between the gate and the gland.
- Keep greased the stem.
- It's recommended to operate the valve (open and close) 1 time per month
