

KNIFE GATE VALVE SILO type PNEUMATIC DOUBLE ACTING

APPLICATION

The slide gate valve under silo is particularly suitable for assembly under silo.

Areas of use: chemical plants, industry, cement, sugar, pneumatic transport, storage.

Fluides: usage exclusif pour granulés, produits pulvérulents et cristallisants.

GENERAL CHARACTERISTICS

Range: from DN100 to DN400.

- Knife gate valve under silo with double acting pneumatic actuator.
- One-piece molded body.
- Unidirectional sealing: direction of installation is indicated by an arrow on the body.
- Installation between flanges ISO PN10.
- Face to face more important than a conventional knife gate valve.
- Internal parts designed to ensure easy passage for products containing particules.
- The gate is guided in the body BY fingers which considerably reduce friction and product accumulating in the body.
- Straight gate attack with chamfered end facilitates the penetration into the product and the closing of the valve.
- Standard polished gate, soft contact with the gaskets
- Very resistant ductile iron packing flange avoids risks of breaks.
- Operating force reduced thanks to the elasticity of the gaskets.
- Preformed profiled sheet support plates from DN50 to DN300 for accessory or kit mounting.
- Full bore when the valve fully opened, ensuring a high flow rate with low head loss.
- Blowing holes in the body to eject low pressure compressed air (<1 bar) against clogging and product accumulation.

STANDARDS

Design	Manufacture according to the requirements of the European directive n° 2014/68/UE «Equipment under pressure» : modulate H. In option: product conform to European directive ATEX «ATmosphère EXplosive» n° 2014/34/UE.					
Face to face	Face to face dimension according to TECOFI standard					
Connection	Mounting between flanges in accordance with EN1092-2 and ISO7005-1 : ISO PN10					
Tests	Pressure test according to standards EN12266-1, DIN 3230, BS 5154 and ISO 5208.					
	DN	Body	Seat	DN	Body	Seat
	DN100-150 :	3.75 bar	2.75 bar	DN250-300 :	2.25 bar	1.65 bar
DN200 :	3 bar	2.2 bar	DN400 :	1.95 bar	1.43 bar	

PRODUCT APPROVALS

CONSTRUCTION

The valves are coated with epoxy paint to protect them against corrosion

Component	Coating
Body (1)	Epoxy powder RAL 6005 150 microns
Support plate (8)	Epoxy liquid RAL 6005 70 microns
Packing gland (7)

WORKING CONDITIONS

Maximum working pressure: DN100-150 : 2.5 bar
DN200 : 2 bar
DN250-300 : 1.5 bar
DN400 : 1.3 bar

Maximum working temperature : -10°C / +80°C (standard tightness)

⚠ The above mentioned pressures are only valid if the direction of assembly indicated by the arrow on the valves is observed.

Tightness
